- Built the GTM enablement and positioning function from zero for an AI-native B2B platform, creating seller-ready value propositions and narratives for enterprise, mid-market, and SMB buyers that helped land the company's first enterprise procurement deal (Splunk, a Cisco company) via a design partner.
- Built the competitive intelligence layer including Battle Cards and Competitor Canvases with an objection-handling framework, positioning an agentic AI product against LLM alternatives and equipping the team across 30-plus enterprise sales conversations.
- Designed onboarding and enablement content and ran a launch event for the SF product-marketing community (speakers from Meta, Google, Atlassian), building seller and user expertise across the product portfolio.
- Ran a structured feedback repository that clustered field and user insights on a regular cadence, surfacing them to sharpen positioning and prioritize roadmap, and drove an onboarding redesign that cut early-stage drop-off ~24% and shortened time to value ~1:40.
- Developed content strategies to reach developers and technical buyers through trusted channels, driving adoption of a new agentic AI product.
